# TABLE OF CONTENTS

## Part A Session Papers

### I.1 Classical Problem in Gravitation (Chairman: E. Lifshitz)

**I.1.1** On Coordinates and Coordinate Transformation in Einstein's Theory of Gravitation  
Chou Peiyian  

**I.1.2** Applications of the Riemann-Hilbert Problem to General Relativity  
F.J. Ernst  

**I.1.3** Ernst Equation Bäcklund Transformations Revisited: New Approaches and Results  
B.K. Harrison  

**I.1.4** The Gravitational Radiation Damping and the Change of Coordinates  
Hu Ning  

**I.1.5** A Non-local Variable for General Relativity  
C.N. Kozameh and E.T. Newman  

**I.1.6** Global Solutions of Yang-Mills and Associated Field Equations  
Y. Choquet-Bruhat

### I.2 Alternative Approaches to Gravitational Theory (Chairman: P. Bergmann)

**I.2.1** Topologically Massive Three-dimensional Vector and Gravity Gauge Theories  
R. Jackiw  

**I.2.2** On Spacetimes Without Maximal Surfaces  
D.R. Brill  

**I.2.3** A Formulation of Nonlinear Gauge Theory and Its Applications  
Lu Qikeng, Guo Hanying and Wu Ke  

**I.2.4** Vacuum Solutions with Double Duality Properties of the Poincaré Gauge Field Theory. II  
P. Baekler, F.W. Hehl and H.J. Lenzen  

**I.2.5** Possible Role of Torsion in Gravitational Theories  
H.T. Nieh  

**I.2.6** On the Motion of a String in a Curved Space-Time  
Gu Chaohao  

**I.2.7** Prolongation Structure, Bäcklund Transformation and Principal Homogeneous Hilbert Problem in General Relativity  
Guo Hanying, Wu Ke and Wang Shikun

**I.2.8** General Relativistic Hydrodynamic Wave Propagation  
A.H. Taub  

**I.2.9** Relativistic Generalization of the Newtonian Force  
A. Qadir and J. Quamar

I.6.2 Some Recent Developments in the Massive Neutrino Cosmology
Lu Tan and Fang Lizhi 461

I.6.3 Black Hole and Wormhole Creation by Phase Transition and Monopole Problem
K. Sato and M. Izawa 481

I.6.4 Self-consistent Generalized Hawking Thermal States for FRW Universes
G. Horwitz 495

I.6.5 Cosmology, Inflation and Supersymmetry
A. Albrecht, S. Dimopoulos, W. Fischler, E.W. Kolb, S. Saby and P.J. Steinhardt 511

I.6.6 Early Universe and GUT
M. Yoshimura 527

I.6.7 On the Structure of Semidegenerate Massive Neutrino Halos
R. Ruffini and L. Stella 545

I.6.8 On Cosmic Censorship: Do Compact Cauchy Horizons Imply Symmetry?
J. Isenberg and V. Moncrief 561

I.7 Physics of Compact Bodies (Chairma: A. Papapetrou)

I.7.1 Space-like Infinity
M. Alexander and P.G. Bergmann 575

I.7.2 Radiation Damping in General Relativity
T. Damour 583

I.7.3 Quasi-normal Modes of a Black Hole
B. Mashhoon 599

I.7.4 Some Recent Developments in Problems of Quasar Like Objects
S. Tsuruta 609

I.7.5 Interpretation of Spectroscopic Variations in SS 433
G.H. Newsom and G.W. Collins, II 625

I.7.6 Nutation-like Effects in the Relativistic Radial Velocities of SS 433
A. Mammano and F. Ciatti 637

I.7.7 Coordinate Conditions for Numerical Relativity
T. Piran 643

I.8 Gravitational Wave Experiments (Chairman: W. Fairbank)

I.8.1 Quantum Theory of the Gravitational Wave Antenna
J. Weber 653

I.8.2 The Gravitational Wave Experiment of the Rome Group
E. Amaldi, P. Bonifazi, E. Coccia, S. Frasca, I. Modena, G.V. Pallottino, G. Pizzella and F. Ricci 655

I.8.3 A Progress Report on the Stanford Low Temperature Gravitational Wave Detector
M. Bassan, W.M. Fairbank, E. Mapoles, M.S. McAshan, P.F. Michelson, B. Moskowitz, K. Ralls and R.C. Taber 667
I.8.4 Gravitational Waves: An Introduction and a Progress Report
W.O. Hamilton 679

I.8.5 Laser Interferometry and Gravitational Waves
H. Billing 705

I.8.6 Gravitational Wave Experiments in China

I.8.7 Progress in the Development of a Niobium Gravitational Radiation Antenna

I.8.8 Developments in Laser Interferometer Gravitational Wave Detectors

I.9 Gavitational Experiments (Chairman: S. Hayakawa)

I.9.1 Tests of the Gravitational Inverse Square Law on a Laboratory Distance Scale
R.D. Newman 755

I.9.2 Cryogenic Equivalence Principle Experiment: Discussion and Present Status
P.W. Worden Jr. 771

I.9.3 Solar System Tests of Relativity
R.D. Reasenberg 781

I.9.4 A Proposed Measurement of the Deflection of Starlight by the Sun Using Hipparcos
J.T. Anderson 797

I.9.5 The Atomic Hydrogen Maser. Is It the Best Clock for Gravity and Relativity Measurements?
R.F.C. Vessot 803

I.9.6 Cosmological Consequences of the Langmuir Condensation and Zakharov Collapse
A.V. Byalko 823

Part B Workshop Papers

II.1 Classical Problem in Gravitation (Chairman: D. Brill)

II.1.1 Junction Conditions and the Propagation of Isometries in General Relativity
L. Herrera and J. Jiménez 889

II.1.2 Some Invariance Theorems of the Geometry in Einstein Non-Symmetrical Field Theory and the Classification of Pseudo-Tensor Field
Liu Shulin 893
II.1.3 Post-Post-Newton Contribution to the Gravitational Deflection of Light in Arbitrary Region
Xu Chongming, Xu Jianjun, Huang Zhenghua and Yang Lantian 899

II.1.4 The Problem of Motion
Wu Ke and Guo Hanying 903

II.2 Alternative Approaches to Gravitational Theory (Chairman: F. Hehl)

II.2.1 Approximate Solution for the $R+R^2$ Theories of Gravitation with Torsion
Zhang Yuanzhong 911

II.2.2 Riemannian Structure on Gauge Group and Metric Compatible Yang-Mills Theory
Liu Yufen 915

II.2.3 Rosen's Bi-metric Theory of Gravity as a Harmonic Map
W.R. Stoeger 921

II.2.4 Group Covariance and Metrical Theory
L. Halpern 927

II.2.5 A Conformally Invariant Theory of Gravitation and Electromagnetism
G. Papini 933

II.2.6 Dynamical Properties of Spinor Gauge Theory
Liu Yaoyang and Zhu Dongpei 937

II.2.7 Newtonian Limit of an $R+R^2$ Theory of Gravity with Torsion
J. Anandan 941

II.2.8 Theories of Gravity Alternative to General Relativity
I. Ciufolini 947

II.3 Gravitational Radiation and Perturbation Problems (Chairmen: T. Damour and G. Tauber)

II.3.1 A Remark on the Problem of Gravitational Radiation
A. Papapetrou 951

II.3.2 Gravitational Radiation from Two Compact Bodies: The Radiative Losses at the Post Linear Approximation of General Relativity
N. Deruelle 955

II.3.3 On the Types of Einstein Equations and Globally Admissible Coordinate Systems
V. Unt 959

II.3.4 Gravitational Radiation from Perturbed Astrophysical Sources: Progress Towards an Optimally Economical and Flexible Theory
U.H. Gerlach 963

II.3.5 Improved Equations for Gravitational Perturbations of the Kerr Geometry
M. Sasaki and T. Nakamura 969

II.3.6 Pseudoanalyticity and Minimal Surface in Electromagnetic Perturbation of the Kerr Geometry
II.3.7 The Conservation Law of Energy-Momentum in General Relativity
Duan Yishi and Wang Youtang 981

II.4 Exact Solutions of Einstein's Equations (Chairman: C. Hoenselaers)

II.4.1 Gravitational Fields with Symmetries: Bundle Connections and Gauge Transformations
F.J. Chinea 989

II.4.2 Einstein Equations, Self-Dual Yang-Mills Field and Non-Linear Models
N. Sanchez 993

II.4.3 On Transformations Which Leave Invariant the Einstein Equations
Pham Mau Quan 997

II.4.4 Field of an Arbitrarily Accelerating Charged Point Mass
Wang Yongjou and Lin Xiang 1001

II.4.5 The Stationary Gravitational Field of an Infinite Rod
Ding Haogang 1005

II.4.6 Imaginary Coordinate, Decrease of the Horizon Area of Schwarzschild Black Holes and Naked Singularities
Wang Yongcheng 1009

II.4.7 The Complexification of a Non-Rotating Sphere: An Extension of the Newman-Janis Algorithm
L. Herrera and J. Jiménez 1017

II.4.8 Electrovac Generalization of Neugebauer's N=2 Solution and a New Nine-Parameter Electrovac Solution of the Coupled Einstein-Maxwell Field Equations
Guo Dongsheng 1023

II.4.9 On the Harmony of the Ernst Equation
C. Reina 1029

II.4.10 Geometrical Meaning of Bäcklund Transformation for Ernst Equation
Hou Boyu, Hou Boyuan and Wang Pei 1033

II.4.11 The N-Fold Charged Kerr Family Solution
Wang Shikun, Guo Hanying and Wu Ke 1039

II.4.12 On the Kramer-Neugebauer Spinning Masses Solutions
M. Yamazaki 1045

II.4.13 Structure of the Two Kerr-Solution
M. Kihara, K. Oohara, H. Sato and A. Tomimatsu 1049

II.4.14 N Rank Zero HKX Transformations
W. Dietz 1053

II.4.15 Exact Global Radiative Solutions to the Bondi Initial Value Problem
R.A. Isaacson, J.S. Welling and J. Winicour 1059

II.4.16 A New Approach to the Algebraic Structure in Stationary Axially Symmetric Gravity
Wu Yongshi and Ge Molin 1067
II.4.17 The Geometry of Sine-Laplace, Sinh-Laplace Equations
Hu Hesheng 1073

II.5 Numerical Relativity (Chairman: T. Nakamura)
II.5.1 Temporal Gage in General Relativity
Y. Choquet-Bruhat and T. Ruggeri 1079
II.5.2 [(2+1)+1]-Dimensional Representation of the Einstein Equations
K. Maeda 1083

II.6 Supersymmetry and Supergravity (Chairman: P. Townsend)
II.6.1 Quaternions and N=2 Supersymmetry
P. Townsend 1087
II.6.2 On the Stability of Kaluza-Klein Vacuum
An Ing and Chen Shi 1091
II.6.3 Discussion About the Irreducible Representations of Superalgebras OSP (m/2n)
Han Qizhi and Sun Hongzhou 1095
II.6.4 Superspace and the Super Killing Equation, Super Algebra
Zhang Lining 1103
II.6.5 Torsion Constraints in Supergravity
S. Bedding 1107
II.6.6 Is Supergravity Well-Posed?
J. Isenberg, D. Bao and P. B. Yasskin 1111
II.6.7 Can Leptons and Quarks Achieve Superunification at Composite Level?
Zhang Dehai 1121
II.6.8 An Approach to the Supergravity Theories
Shao Changgui 1129
II.6.9 Hermitian Gravity and Supergravity
V. De Sabbata and M. Gasperini 1135
II.6.10 Supergravity as a Generalized Einstein-Cartan Connection
B. Morel 1147

II.7 Quantum Gravity (Chairman: C. DeWitt)
II.7.1(a) Is Our Universe an Open System?
D. N. Page 1153
II.7.1(b) Is Gravity Quantized?
D. N. Page 1157
II.7.2 Manifestly Covariant Canonical Formalism of Quantum Gravity
N. Nakanishi 1161
II.7.3 A Gauge Invariant Resummation of Quantum Gravity
A. Strominger 1165
II.7.4 Kaluza-Klein Vacua
P.G.O. Freund 1171

II.7.5 Micro canonical Quantum Gravity
A.E. Strominger 1175

II.8(A) Quantum Field Theory in Curved Space-Time (A) (Chairman: L. Parker)

II.8(A).1 Quantum Effects near Horizons in a Stationary Riemann Space-Time
Zhao Zheng and Guei Yuanxing 1177

II.8(A).2 Quantum Mechanical Tests of General Relativity
J.Anandan 1185

II.8(A).3 Approximate Stress Tensors near a Black Hole
D.N. Page 1189

II.8(A).4 The Hawking Radiation of Charged Dirac Particles in Kerr-Newman Spacetime
XuDianyan 1193

II.8(A).5 Blackbody Radiation from Light Cone in Flat Space Time
U.H. Gerlach 1201

II.8(A).6 On Defining Particles in Robertson-Walker Spacetimes
T. Dray 1205

II.8(A).7 Feynman's Path-Integral Method and Hawking Evaporation
Liu Liao 1209

II.8(A).8 On the Reversible Processes in the Thermodynamics of Black Hole
Chen Lianfan and Zhou Minyao 1217

II.8(A).9 A Geometrical Foundation of a Unified Field Theory
G.E.Tauber 1221

II.8(B) Quantum Field Theory in Curved Space-Time (B) (Chairman: H.T. Nieh)

II.8(B).1 Generalised Field Theory and General Relativity
A.H. Klotz 1237

II.8(B).2 The Geometrical Origin of Temperature of Quantum Fields in Equilibrium on Spacetimes with Horizons
Zhou Minyao, Chen Liangfan and Guo Hanying 1243

II.8(B).3 Quantization Ambiguity and the Aharanov-Bohm Effect
G. Kunstatter 1247

II.8(B).4 An Almost Trivial Gauge Theory in the Limit of Infinite Gauge Coupling Constant
S. Kaptanoglu 1253

II.9 Collapse Objects (Chairman: S. Tsuruta)

II.9.1(a) Pulsar Statistics and Two Types of Pulsars
Huang Jiehao, Huang Keliang and Peng Qiuhe 1265

II.9.1(b) Thermal X-Ray Emission from Isolated, Older Pulsars: A New Heating Mechanism
Huang Jiehao, Peng Qiuhe, Huang Keliang and R.E. Lingenfelter 1269

II.9.2 Transport Properties of Dense Matter
N. Itoh, S. Mitake, H. Iyetomi and S. Ichimaru 1273

II.9.3(a) Abnormal Neutron Stars with Abnormal Protons
Qu Qinyue, Wang Zhenru, Lu Tan and Chu Yi 1277

II.9.3(b) Quark-Abnormal Neutron Stars
Qu Qinyue, Wang Zhenru and Zhao Jiabing 1279

II.9.4 The Distribution of the Projected Density of Stars near the Reissner-Nordstrom Black Hole in a Globular Cluster
Shen Yougen and Zhang Qinyuan 1283

II.9.5 Behavior of Entropy of Self-Gravitating Radiation in Collapse
Zhang Zhenjiu 1289

II.9.6 Clusters of Black Holes as Models for Active Galactic Nuclei
W.R. Stoeger and A.G. Pacholczyk 1295

II.10 Inhomogeneities in the Universe (Chairmen: Zou Zhenlong and Gao Jiangong)

II.10.1 Density Fluctuation Models and Low-Order Harmonics in the Background Radiation Anisotropy
R. Fabbri, I. Guidi and V. Natale 1301

II.10.2 The Cosmic Density Wave and Its Observable Vestige
Liu Yongzhen 1305

II.10.3 The Periodicity in the Distribution of Quasar Redshifts - An Analysis for Quasars Around Selected Directions
Deng Zugan 1309

II.10.4 Systematic Differences in the Determination of \( q_0 \) and Its Implication
Hu Fuxing and Fang Lizhi 1315

II.10.5 The Exponential Law for Superluminal Expansion of Quasar 3C273
Cao Shenglin and Liu Yongzhen 1319

II.10.6 Gravitational Lens Effects of Degenerate Neutrino Celestial Objects
Xu Chongmin, Wu Xuejun and Xiang Shouping 1325

II.10.7 Diffraction Effect of Plane Electromagnetic Wave by a Spherical Gravitational Field of Normal Star
Wang Renchuan, You Junhan and Xiang Shouping 1329

II.10.8 The Cosmic Density Wave and the Lemaitre Model
Yang Lantian, Cao Shengling, Xu Chongming and Yang Pibo 1337

II.11 GUT and Cosmology (Chairman: K. Sato)

II.11.1 The First-Order Phase Transition and the Origin of Clusters of Galaxies
H. Kodama, M. Sasaki and K. Sato 1341

II.11.2 Gravitational Effects on Vacuum Decay at Finite Temperature
Su Rukeng and Bi Pinzhen 1343
